

```
do {  
    statements;  
} while (condition);
```

The diagram illustrates the execution flow of a do-while loop. A horizontal line extends from the right side of the `while (condition);` statement. This line splits into two paths: one that turns left and loops back to the `statements;` line, labeled with the word `true` in green; and another that turns down and then left, pointing away from the loop, labeled with the word `false` in green.
